

FAQs

How does INDIBA® work?

INDIBA® technology favors the biological response of the tissue, accelerating the recovery, reducing pain and obtaining excellent results in rejuvenation, hydration, pain decreasing and an increase of blood flow, among many other benefits.

Do the treatments cause pain?

No, treatments are pain free. INDIBA® Deep Care treatments are totally safe and do not cause pain.

How often can it be applied?

INDIBA® technology is innocuous and can be applied without limit of sessions. Taking into account the combination with other treatments, your doctor will prescribe the best procedure to obtain the desired results.

How many sessions are recommended?

The number of sessions vary according to the treatment.

For example, for genital rejuvenation you may need around 3 sessions and you will see significant changes on vaginal dryness after just 3 to 4 sessions. To treat vaginismus you will need from 3 to 6 applications, and urine leakage decreases after only 4 sessions.

In combined treatments the physician will always be the one who determines the number of ideal sessions for your specific situation.

Can I use INDIBA® if I am under other medical treatments or if I have dermal fillers, metal implants or botulinum toxin?

Yes. INDIBA® is compatible with other procedures and can be used in areas with dermal fillers (for instance, hyaluronic acid), botulinum toxin, near areas with metal implants (for instance, hips), pre and post-surgery and other medical procedures.

For more than 35 years, INDIBA, S.A. has been dedicated to technology research, development and innovation of radiofrequency technology, aimed to medical treatments.

DEEP CARE
Medical Technology

Recover your health and
your most intimate beauty

Discover why INDIBA® Deep Care is the pioneer medical technology in Radiofrequency that will help you to recover your health and your most intimate beauty

Safe and painless treatments

How can we help you?

Genital rejuvenation >>

Non-aggressive treatments to reverse the pass of time in our intimate area are increasing in demand in medical consultations. Laxity, lack of hydration or scars are not going to be a problem anymore.

Menopause >>

Menopause can arrive accompanied with bothersome symptoms such as vaginal dryness, less lubrication, vaginal discomfort or vaginal burning or pain, whether there is sexual intercourse or not.

Menopause is unavoidable, but we can diminish and even eliminate its annoying related symptoms.

Urine leaks

It is one of the topics that we have a hard time talking about, but it is much more common than it seems. Although this can be more frequent from certain age, urine leaks can even happen to young women. Births, menopause, and other factors can weaken the bladder and urethra muscles, but we know how to help you!

Besides, our technology is complementary to surgery (labiaplasty, vulvoplasty, hymenoplasty, perineoplasty) accelerating recovery and reducing pain

Absence of orgasm

Anorgasmia is the difficulty of attaining orgasm during a sexual intercourse. It is a taboo topic that we do not like to talk about, but that affects up to 30% of women at some point in their lives. And yes, it does have a solution.

Vaginal dryness

Whether it is because of menopause, postpartum period, stress, contraception methods and other medicines, or from the use of tampons, panty liners or certain soaps, vaginal dryness is very common and affects women from all ages causing irritation, itching, and pain mostly during sexual intercourse, which makes us feel uncomfortable and annoyed... but we can help you.

Vaginismus

Vaginismus is the impossibility to have sexual intercourse involving vaginal penetration due to involuntary contraction of vaginal muscles. It can be physiological or psychological, but in both cases this is a problem since it affects our sex life.

Vaginismus is often suffered in silence, but we have ways to solve this.

Inconveniences and discomfort

Many syndromes, illnesses, and some genital problems cause pain, decreasing our quality of life and affecting our daily routine.

Living with pain is not normal. Do not wait any longer.

Ask your doctor for INDIBA® Deep Care and benefit from the results
