## FAQs

### How does INDIBA® work?

INDIBA® technology promotes the biological response of the tissue, accelerating recovery after a treatment or hair transplant, reducing pain, and obtaining better results in hair strengthening and redensification, etc.

### Are the treatments painful?

No, the applications are painless and pleasant.

### How often can it be applied?

INDIBA® technology is harmless and can be applied without any session limit. Depending on the combination with other treatments, your doctor will prescribe the best procedure to obtain the desired results.

### How many sessions are recommended?

For a pre-transplant/graft treatment, a single session would be enough and for a post-transplant/graft, results would be obtained in 2 to 4 sessions. In combined treatments, the medical professional will always determine the ideal number of sessions for your case.

### What benefits does INDIBA® provide before and after a hair transplant or graft?

It improves the condition of the scalp before and after hair transplants or grafts, by stimulating, rebuilding and vascularizing the tissue matrix:

- Stimulation of the donor area in hair transplants/grafts
- Preparation of the recipient area in hair transplants/grafts
- Better maintenance of transplanted hair areas

### Can i use INDIBA® with other hair treatments?

Yes, INDIBA® is compatible with other medical hair treatments, such as transplants, micro-grafts, PRP, botulinum toxin, mesotherapy, Leds.
